Coupled with the firewall protection is McAfee's antispam e-mail filters, which catch and destroy viruses and other malware before they have the chance to install themselves on your computer.. McAfee Internet Security automatically searches for any updates to its library of viruses to check for, so you will never have to worry about checking for updates or downloading new files.. It also offers easy navigation to core features of the security software, with prominent command bars for commonly used tools such as "Virus and Spyware Protection" and "Web and Email Protection.. You have to enable SiteAdvisor in McAfee Internet Security by clicking the Web and Email Protection bar, then the SiteAdvisor link, and finally the McAfee SiteAdvisor checkbox under Available Features.. Like the firewall and antispam applications, SiteAdvisor helps computer users be proactive when it comes to security by eliminating or avoiding viruses before they ever get a foothold on desktops and laptops.
